

FD08 MMT Summary

The MMT met today to review orbiter systems and mission progress. Endeavour continues to perform well, and the previously mentioned systems items were briefly statused. The mission is progressing extremely well.

The SSME, SRB, and ET MMT reports were presented. Other than the ET foam releases observed, the reports were completely nominal. As proven by the detailed FD2 and FD3 inspections, Endeavour's TPS is in great shape. However, the foam releases will be assessed for subsequent flights.
